

THE ESSENTIAL ENDOCRINE SYSTEM

LEARN THE COMPONENTS AND FUNCTIONS
OF THIS ESSENTIAL SYSTEM

Karen Shaw Becker DVM

ELGIN COMMUNITY COLLEGE SIEGLE AUDITORIUM

Saturday, March 20 2010, 9am – 1 pm

The endocrine system affects every aspect of your pet's health. Your pet's pituitary, adrenal, thyroid, thymus and even pancreas work together to keep his system in balance.

Endocrine disease is one of the most common reasons that dogs, cats, and other pets become ill and die. Thyroid malfunction causes chronic disease. Adrenal problems, which are increasing rapidly, cause chronic and acute disease with results that are often fatal.

Food, spaying/neutering, environmental factors, stress and genetics all affect the glandular system. There is much the informed caretaker can do to prevent problems

Find out how adrenal disease, thyroid disease, diabetes, auto-immune disease and cancer all have roots in endocrine dysfunction, and what you can do help reduce your pet's chances of endocrine imbalance.

There will be a lot of information packed into this seminar, but we promise that there will be some fun, too!

REGISTRATION

SEMINAR REGISTRATION: \$69.00 PER PERSON

You may register online or by mail.

- Online registration: naturalpetproductions.com
- Registration by mail (pay with check):
Beth Taylor
31 Lovell St., Elgin, IL 60120
